Position: Software Engineer

Project: Time & Attendance Management System (Sprinter Web Application)

Project Description: Time and attendance systems are used to track and monitor when employees start and stop work. A time and attendance system provides many benefits to organizations as it enables an employer to have full control of their employees' working hours as it monitors late arrivals, early departures, time taken on breaks and absenteeism. It also helps to control labor costs by reducing over-payments, which are often caused by paying employees for time that are not working, and eliminates transcription error, interpretation error and intentional error. TNA systems are also invaluable for ensuring compliance with labor regulations regarding Proof of attendance. All these benefits provide both employer and employees with confidence in the accuracy of their wage payments all while improving productivity.

We manage all the reports of employee like daily attendance, monthly attendance, late comer, early leaver, shift management, leave management, Employee management, and Visitor management, Overtime reports, Department wise & location wise head present absent count.

Even I have knowledge of biometric devices.
